

# AMMORTIZZATORI

## CATALOGO ED.2

DYNAS

## AMMORTIZZATORI DYNAS: I VOSTRI ALLEATI PER UNA GUIDA SICURA E CONFORTEVOLE

Gli ammortizzatori sono l'elemento chiave delle sospensioni di un'auto. Operano in sinergia con le componenti elastiche che li mantengono fissati al telaio della vettura: andando ad assorbire in modo graduale e progressivo le oscillazioni evitano che la vettura, affrontando le irregolarità stradali, assuma un moto oscillatorio dannoso sia per il confort di marcia che per la tenuta di strada.

Compiono quindi un lavoro particolarmente gravoso, dovendo gestire nel corso della loro vita utile un numero elevatissimo di oscillazioni, sia lente - nel caso di avallamenti stradali - che rapide - nel caso ad esempio di buche nell'asfalto o marcia su terreni sconnessi. Il tutto in ambienti con temperature estremamente variabili e alla mercé di agenti atmosferici, polvere e fango.

E' quindi indispensabile che nella loro progettazione vengano presi tutti gli accorgimenti necessari per far sì che possano svolgere appieno il loro lavoro in modo sicuro, confortevole e stabile per tutta l'arco di utilizzo previsto. Sono tutti fattori che sono stati ben tenuti in considerazione nella progettazione degli ammortizzatori **DYNAS**.

A livello di tecnologia di base, tutta la gamma prodotto è declinata in ammortizzatori **BITUBO a GAS**.

Sono molteplici i vantaggi che questa tipologia di prodotti possono garantire. Ma quali sono in sintesi le loro peculiarità?

Di base gli ammortizzatori per smorzare le sollecitazioni cui sono sottoposti basano il proprio funzionamento su un **pistone con gruppo valvolare**. Quando vengono raggiunti da una sollecitazione l'**olio** contenuto nel cilindro passa, in modo calibrato, da una parte all'altra del pistone, rallentando la corsa dello **stelo**.

Anche negli ammortizzatori a GAS, contrariamente a quanto si potrebbe pensare, la funzione di smorzamento viene principalmente svolta da un **olio** che è appositamente formulato per questo impiego e quindi particolarmente stabile in termini di viscosità e con elevato potere antischiuma. Gli spazi interni dove nelle varie fasi non viene a trovarsi olio risultano essere riempiti da un **gas** a base di Azoto che contribuisce in particolare al ridurre al minimo il rischio di emulsione dell'olio.

La struttura **BITUBO** prevede la presenza di due cilindri concentrici: in quello più interno scorre il pistone con gruppo valvolare mentre quello esterno detto **secondario** ha la funzione di contenere una parte del gas in misura variabile rispetto all'estensione dello stelo in quel dato momento. Questa struttura, relativamente complessa, garantisce diversi vantaggi rispetto ad un ammortizzatore a tubo singolo:

- *Maggior corsa a parità di ingombro complessivo dell'ammortizzatore;*
- *Superiore robustezza: il cilindro interno è protetto dall'intercapedine e può funzionare correttamente anche in caso di lievi ammaccature sul corpo esterno.*
- *Il gas contenuto è caricato a pressioni inferiori rispetto a quanto necessario in un ammortizzatore monotubo, consentendo una maggior durata e costanza di prestazioni.*

Esaminiamo nel dettaglio il funzionamento degli ammortizzatori **DYNAS**.

**Fase di COMPRESSIONE:** partendo da una posizione estesa, l'**olio** viene a trovarsi nella parte inferiore dell'ammortizzatore. Applicando una compressione lo **stelo** viene spinto verso il basso e viene frenato dal **pistone con gruppo valvolare** in modo progressivo: a seconda della forza e velocità applicate l'**olio**, presente nella parte bassa fluisce attraverso le valvole calibrate verso la parte alta dissipando l'energia e trasformandola in calore. Mano a mano che l'olio si sposta nell'altra camera lo spazio vuoto viene immediatamente riempito dal **gas** precaricato nell'ammortizzatore e presente sia nel tubo principale che nel tubo **secondario**. Avvicinandosi alla posizione di fondo corsa o in caso di sollecitazione particolarmente intensa può entrare in funzione la **valvola di fondo** che permette se necessario l'afflusso di olio verso il tubo secondario (in cui normalmente è presente solo il gas).

**Fase di ESTENSIONE:** è speculare alla fase di compressione: qui l'olio si trova inizialmente nella parte superiore del **pistone con gruppo valvolare** e l'assorbimento della sollecitazione viene portato a termine dal passaggio di olio verso la parte bassa dell'ammortizzatore.

**Nello sviluppo degli ammortizzatori DYNAS nessun dettaglio tecnico è stato trascurato.**

### I materiali

Sono stati selezionati metalli con le migliori caratteristiche tecniche in funzione della loro destinazione d'uso. L'impiego di questi metalli, abbinati a trattamenti termici - per una maggior durezza - ed a trattamenti galvanici - per conferire proprietà anticorrosione - garantisce affidabilità e resistenza durante tutta la vita del prodotto.

Lo **stelo** viene lavorato con lucidatrici longitudinali ad alta efficienza e, dopo una serie di passaggi intermedi, viene cromato deponendo uno strato di ben **20 micron**, quindi ben al di sopra degli standard usuali.

**Scocca e rinforzi** vengono assemblati in isole di **saldatura robotizzata**, garantendo un elevato controllo di tutti i parametri di questa delicata fase. Poiché per normale reazione durante la fase di saldatura viene a generarsi dell'idrogeno che, se assorbito dal metallo, può andarne a inficiare le caratteristiche, **DYNAS** sottopone poi tutte le parti ad un trattamento di **deidrogenazione**: viene così rimosso l'idrogeno dal metallo preservandone appieno durezza e resistenza.

**Pistone e gruppo valvolare** vengono realizzati con materiali idonei a durare nel tempo. Sono tra i componenti più stressati in quanto diretta interfaccia tra il movimento dello stelo ed il trasferimento della relativa forza sull'olio. Nella loro progettazione la delicata fase di taratura viene svolta non solo al banco ma anche con dei **test su strada su veicoli** permettendo di regolarli in modo ottimale garantendo confort e buon feedback di guida.

**Paraolio e guarnizioni** sono realizzati in materiali atti a sopportare pressioni e temperature ben al di sopra di quelli di funzionamento. Sono infatti in grado di operare a temperature comprese tra i –40° e 160° senza danneggiarsi, garantendo così una perfetta tenuta nel tempo.

## Olio e gas

L'**olio** utilizzato, unitamente alle caratteristiche del pistone/gruppo valvolare, ha un effetto importantissimo sulle caratteristiche di funzionamento dell'ammortizzatore.

Tra le principali caratteristiche vanta:

- *Ottima capacità di carico a pressione*
- *Elevata protezione dall'usura delle componenti interne*
- *Ottima capacità di separazione dal gas*
- *Alta resistenza dall'invecchiamento*
- *Variabilità minima della viscosità al cambio della temperatura*
- *Proprietà antischiuma*
- *Range di lavora da –40° a 100°*

La sua formulazione ne permette un comportamento in piena sinergia con il **gas** impiegato, a base di azoto, scongiurando la possibilità che si verifichi una emulsione dell'olio anche se sottoposto a condizioni gravose.

## La verniciatura

DYNAS ha scelto per gli ammortizzatori di utilizzare la **verniciatura eletroforetica** in luogo della tradizionale verniciatura a polvere. Essa sfrutta il fenomeno della cataforesi: prevede l'immersione dei manufatti in un bagno composto da vernice diluita con acqua che, tramite il passaggio di corrente, riveste completamente la superficie delle parti immerse.

Questa tecnologia consente di applicare al prodotto uno strato di vernice dallo **spessore accuratamente controllato** e uniforme senza colature, sia su superfici piane che spigolose. Questo, unito alla presenza di un **legante chimico poliuretanico**, conferisce alla verniciatura caratteristiche al contempo di flessibilità e resistenza garantendo una eccellente resistenza e protezione dagli agenti atmosferici.

## Test durante il ciclo produttivo

Essendo prodotti piuttosto complessi sono stati predisposti diversi test di verifica qualità sia durante che al termine del ciclo produttivo. Tra i principali:

- **Stress test:** ciclicamente un campione di prodotto viene prelevato dalla linea e posto su un banco dinamometrico che lo sottopone a **12 milioni di attivazioni consecutive**, senza soste e con condizioni di carico superiori a quelle di lavoro. Al termine il prodotto deve presentare ancora comunque caratteristiche vicine a quelle del prodotto nuovo
- **Test tenuta paraoli:** a campione viene verificato che il prodotto, sottoposto a carichi estremi e posto in movimento, non manifesti danneggiamenti o deformazioni dei paraoli o trasudamenti dalle guarnizioni.
- **Test in nebbia salina:** a campione, sia le componenti vernicate che lo stelo vengono inseriti in camere con ambienti saliti estremamente corrosivi, per simulare in modo accelerato l'effetto degenerante degli agenti atmosferici cui gli ammortizzatori sono sottoposti con l'uso. Nei tempi previsti per le prove non devono manifestarsi fenomeni ossidativi.
- **Ispezione della forza di smorzamento:** a campione viene testata la capacità di smorzamento a 7 diverse velocità, verificando che la risposta sia in linea con quanto previsto in fase di progettazione.
- **Verifiche a fine linea:** **TUTTI** gli ammortizzatori prodotti vengono testati a due diverse velocità, controllando che rispettino le specifiche di progetto.

Gli ammortizzatori **DYNAS** sono tutti verniciati in nero opaco; codice prodotto e riferimento lotto sono incisi con tecnologia laser ed integrati da una etichetta che ricorda che **gli ammortizzatori DYNAS sono prodotti in stabilimenti che operano secondo normative IATF16949:2016**

All'interno della robusta confezione gli ammortizzatori sono inseriti in **busta pluriball** e protetti da **distanziali e protezioni in cartoncino** al fine di farli pervenire integri fino all'utilizzatore finale.

Completa il tutto un pieghevole con le **istruzioni di base per il montaggio**, in due lingue.

L'imbocco riporta una etichetta con codice prodotto, principali applicazioni, quantità per scatola e posizione di montaggio, nonché il codice a barre.

### Gli accessori

Per gli ammortizzatori inclusi in gamma sono forniti separatamente gli accessori di montaggio:

**Supporti:** costituiscono una delle principali interfacce dell'ammortizzatore con la vettura ed hanno il delicato compito, oltre al permetterne il mutuo scambio di forze, quello di consentire la corretta rotazione dell'ammortizzatore in fase di sterzata.

**Soffietti parapolvere:** vanno a riparare le parti più sollecitate dell'ammortizzatore da polvere e acqua che potrebbero ridurne drasticamente la durata nel tempo.

**Tamponi fondo corsa:** in caso di escursioni molto elevate vanno ad assorbirne l'energia residua andando ad evitare di danneggiare gli elementi interni dell'ammortizzatore.

### La garanzia sul prodotto

Gli ammortizzatori DYNAS sono coperti da **garanzia di 2 anni**.

Tutti i dettagli di tale copertura sono consultabili sul sito [www.dynas.it](http://www.dynas.it).

**DYNAS shock absorbers: your allies for a safe and confortable driving**

DYNAS shock absorbers are made with an high attention to materials and production processes

They are manufactured in plants operating according **IATF16949:2016** rules, so with the same standards that car manufacturers require to their parts suppliers.

Range include **twin tubes gas shock absorbers** only: this is the best technology currently available for standard use, granting good performances, a safe driving and a stable functioning over all their life time.

In summary:

**Materials:** only high quality steels are used, with employing of state of the art technologies during all phases. **Chrome applied on the stem is one of the most thick on the market, up to 20 micron.**

All seals are made with high quality rubbers that can work also over standard use conditions.

**Welding:** all parts are welded on an adequate and well prepared surface. All parts involved undergo a **dehydrogenation treatment** in order to eliminate hydrogen could be absorbed by metals during this phase, in order preserve their strengthness.

**Painting:** all DYNAS shock absorbers are black matt painted by an **electrophoretic painting process**. It gives further advantaged if compared with a standard powder process, granting a layer of paint with constant thickness on all surfaces, even on edges and corners, and an high robustness thanks to a polyurethane chemical binder.

**Process and final tests:** DYNAS shock absorbers can count on severals sample tests during different phases to test efficacely each of them. Moreover, at the end, **the 100% of production is tested at two different speeds** in order to grant that only products in line with needed performances are packed.

**Packing:** a sturdy carton box is used for DYNAS shock absorbers. Moreover, internally they are placed in a pluriball bags and protected with carton supports and collars in order to preserve them up to the installer.

DYNAS also offer, for shock absorbers included in the range, all mounting accessories like strut mounts, dust covers and bumpers in order to permit a full maintenance to the suspension system.

**DYNAS shock absorbers are covered with a 2-years warranty.** Please refer to [www.dynas.it](http://www.dynas.it) for all details.

## Amortisseurs DYNAS: vos alliés pour une conduite sûre et confortable

Les amortisseurs DYNAS sont fabriqués avec une grande attention aux matériaux et aux processus de production.

Ils sont fabriqués dans des usines qu'ils suivent les directives **IATF16949:2016**, donc avec les mêmes normes que les constructeurs automobiles exigent de leurs fournisseurs de pièces.

La gamme comprend uniquement des amortisseurs à **gaz bitubes**: c'est la meilleure technologie actuellement disponible pour une utilisation standard, garantissant de bonnes performances, une conduite sûre et un fonctionnement stable sur toute leur durée de vie.

En résumé:

**Matériaux**: seuls des aciers de haute qualité sont utilisés, en utilisant des technologies de pointe pendant toutes les phases. **Le chrome appliqué sur la tige est l'un des plus épais du marché**, jusqu'à 20 microns. Tous les joints sont fabriqués avec des caoutchoucs de haute qualité qui peuvent également fonctionner dans des conditions d'utilisation bien plus que standard.

**Soudage**: toutes les pièces sont soudées sur une surface adéquate et bien préparée. Toutes les pièces concernées subissent un traitement de **déshydrogénéation** afin d'éliminer l'hydrogène qui pourrait être absorbé par les métaux lors de cette phase, afin de préserver leur solidité.

**Peinture**: tous les amortisseurs DYNAS sont peints en noir mat par un procédé de **peinture électrophorétique**. Il donne encore plus d'avantages par rapport à un processus de poudre standard, garantissant une couche de peinture d'épaisseur constante sur toutes les surfaces, même sur les bords et les coins, et une grande robustesse grâce à un liant chimique polyuréthane.

**Process et tests finaux**: Les amortisseurs **DYNAS** peuvent compter sur plusieurs tests sur échantillons lors de différentes phases pour tester efficacement chacun d'entre eux. De plus, à la fin, **100% de la production est testée à deux vitesses différentes** afin de garantir que seuls les produits conformes aux performances requises soient emballés.

**Emballage**: une boîte en carton solide est utilisée pour les amortisseurs **DYNAS**. De plus, à l'intérieur, ils sont placés dans des enveloppes à bulles et protégés par des supports et des colliers en carton afin de les conserver jusqu'à l'installateur.

**DYNAS** propose également, pour les amortisseurs inclus dans la gamme, tous les **accessoires de montage** tels que soufflets, coupelles et butées afin de permettre un entretien complet du système de suspension.

**Les amortisseurs DYNAS sont couverts par une garantie de 2 ans.** Veuillez vous référer à [www.dynas.it](http://www.dynas.it) pour tous les détails.

## DETtaglio PRODOTTI AMMORTIZZATORI

## AM3000

## AM3001

## Caratteristiche

Zona di montaggio:	Anteriore
Sistema:	A doppio tubo
Tipologia:	A pressione del gas
Fissaggio Superiore:	SPINA
Fissaggio Inferiore:	COLLARE
Diametro Corpo:	50
Diametro Stelo:	22
Interasse Boccole:	
Note:	

## Caratteristiche

Zona di montaggio:	Posteriore
Sistema:	A doppio tubo
Tipologia:	A pressione del gas
Fissaggio Superiore:	SPINA
Fissaggio Inferiore:	OCCHIELLO
Diametro Corpo:	45
Diametro Stelo:	12,5
Interasse Boccole:	37
Note:
